PROFESSIONAL SUMMARY

Senior Flutter Engineer and frontend team lead with 5+ years of production Flutter and Dart experience building and shipping cross-platform mobile applications for Android, iOS, and web. Specialised in Clean Architecture, BLoC/Cubit state management, native platform integration (Kotlin, Java, Swift), real-time communication over WebSockets, and performance optimisation. Led frontend teams of up to 6 engineers across AI, healthcare, fintech, real estate, EdTech, and wellness products, including an app scaled to 1M+ global downloads. Proven track record incrementally migrating live native Android applications to Flutter, re-architecting legacy Provider codebases onto BLoC and SOLID design, and owning CI/CD automation and release management on Google Play Console and App Store Connect.

CORE TECHNICAL SKILLS

Core Stack: Flutter, Dart, BLoC/Cubit, Clean Architecture, REST APIs, Firebase, native Android/iOS integration, CI/CD

Languages: Dart (primary), Kotlin, Java, Swift, C, C++, Python, JavaScript, SQL

Mobile & Cross-Platform: Flutter, Flutter Web, Flutter Desktop (Windows, macOS, Linux), Android (native), iOS (native), Material Design, Cupertino, responsive and adaptive UI, custom animations, internationalisation (intl), accessibility

Native Integration & Migration: Native Android and iOS app lifecycle, incremental native-to-Flutter migration, Flutter add-to-app hybrid integration, native SDK wrappers, platform channels (MethodChannel, EventChannel), Pigeon, native Android modules (Kotlin, Java, Gradle), native iOS modules (Swift, CocoaPods, Xcode), native SDK bridging, background services, runtime permissions

Architecture & State Management: Clean Architecture, SOLID principles, BLoC, Cubit, Provider, MVVM, MVC, MVP, dependency injection (GetIt), repository pattern, typed functional error handling (dartx Either), go_router declarative navigation, server-driven UI, feature-first modular architecture, legacy code refactoring

Networking & Real-Time: REST APIs, Dio, WebSockets, Socket.IO, WebRTC, JSON serialisation/deserialisation, interceptors, secure token handling, OAuth 2.0, encrypted data handling, mobile security best practices, offline-first sync and local persistence

Backend & Cloud: Firebase (Authentication, Firestore, Cloud Messaging, Crashlytics, Analytics, Remote Config, App Distribution), AWS, SQLite, Hive, SharedPreferences

Concurrency & Performance: Dart threading and concurrency model, Isolates, Streams, Futures, async/await, event loop, Flutter DevTools profiling, memory-leak detection, widget rebuild reduction, 60/120 FPS rendering, app size and startup optimisation, lazy loading

Testing, Automation & Quality: Unit, widget, and integration testing, bloc_test, mocktail, test coverage reporting, mobile test automation in CI, quality gates, code review, static analysis, linting

DevOps, CI/CD & Release: GitHub Actions, GitLab CI, Bitbucket Pipelines, Azure DevOps, Codemagic, Fastlane, automated build/test/release pipelines, build flavors and environment config, Google Play Console, App Store Connect, TestFlight, code signing, provisioning profiles, phased rollouts

Integrations: Razorpay payment gateway, Google Maps SDK and Places API, push notifications (FCM, APNs), deep linking, GoRouter, Voice Activity Detection (VAD), AI/LLM API integration

Leadership & Delivery: Frontend team leadership, solution design, technical risk identification and mitigation, architecture decision ownership, code review standards, mentoring, client requirement translation, Agile, Scrum, Kanban, sprint planning

Tools: Git, GitHub, GitLab, Bitbucket, Jira, Figma and design system implementation, Postman, Android Studio, Xcode, VS Code

PROFESSIONAL EXPERIENCE

Brane Enterprises Pvt Ltd | Hyderabad, India

2025 – Present

Senior Flutter Engineer (Lead) — AI Applications

- Own end-to-end frontend architecture for enterprise-grade, AI-powered mobile applications on Android and iOS, leading a team of 6 Flutter engineers across architecture decisions, code review standards, sprint planning, and mentoring.
- Led the end-to-end migration of a production application from Provider to BLoC, re-architecting the application onto Clean Architecture with declarative go_router navigation while the team continued shipping features.
- Applied SOLID principles to decouple presentation, domain, and data layers, and introduced GetIt dependency injection so feature modules are independently unit-testable, cutting state-related production defects.

- Built a custom AI voice assistant module using on-device Voice Activity Detection (VAD) models, bridging native audio capture through platform channels in Kotlin and Swift.
- Designed a server-driven UI engine with dynamic widget serialisation and deserialisation, enabling product teams to ship UI changes without an app store release.
- Engineered a Dio networking layer with interceptors for retry, error normalisation, and secure token refresh.

Eclature Technologies | Hyderabad, India
Senior Flutter Engineer | Frontend Team Lead

2024 – 2025

- Led a frontend Flutter team of 6 engineers, owning architecture, estimation, release timelines, code review standards, and mentoring for globally distributed applications.
- Built a global review platform from scratch using BLoC, Dio, and GoRouter, serving users across multiple international markets.
- Implemented CI/CD pipelines with automated test execution as a release quality gate, automating build signing and distribution and removing manual steps from the release cycle.
- Managed end-to-end deployment to Google Play Store and Apple App Store, including code signing, provisioning profiles, phased rollouts, and store review compliance.
- Delivered an EdTech tutorial application using advanced Flutter animation and caching patterns to improve session engagement and retention.
- Worked directly with clients to translate business requirements into technical solution designs, architecture decisions, and delivery estimates.

Marami Infotech | India
Flutter Developer → Team Lead

2023 – 2024

- Owned the incremental migration of the company's portfolio of native Android applications (Kotlin/Java) to Flutter, embedding Flutter screens into the live native apps via add-to-app so releases continued uninterrupted; chose incremental delivery over a big-bang rewrite specifically to de-risk a portfolio-wide migration of live apps.
- Reached full feature parity and consolidated Android and iOS delivery onto a single codebase, cutting maintenance effort through shared architecture, routing, and reusable component libraries.
- Delivered 10+ production real estate applications to Google Play and the App Store within a single year; recognised as Employee of the Year.
- Architected dynamic property-listing modules handling high-volume image assets with real-time pricing updates and cached image loading.
- Integrated Google Maps SDK and Places API with custom filtering, geospatial querying, and location-based search.
- Implemented Razorpay payment gateway flows for property booking, including signature verification and failure/retry handling.

CodePrism Technologies | India
Junior Flutter Developer

2021 – 2023

- Transitioned from ReactJS to Flutter and became a core contributor to a meditation and wellness platform that reached 1M+ global downloads.
- Reduced cold start time and eliminated frame drops in audio streaming and playlist screens using Flutter DevTools profiling and widget rebuild optimisation.
- Contributed to a telemedicine platform: secure appointment scheduling, WebRTC video consultation, encrypted medical record handling, and real-time FCM patient reminders.
- Built background audio streaming with native Android and iOS integration, offline-first caching and local persistence, mood logging, and streak calculation using Cubit and BLoC.

OPEN SOURCE

Flutter Portfolio (open source) | github.com/manoharthullimalli09-flutter-coder/manoharthullimalli09-flutter-coder.github.io Personal project

- Built a cross-platform Flutter application running from one codebase on Web, Android, iOS, macOS, Windows, and Linux, structured on Clean Architecture with BLoC/Cubit, get_it injection, go_router, and typed error handling via dartz.
- 84 tests across use case, repository, BLoC, and widget layers with zero analyzer issues; a GitHub Actions pipeline gates every deployment on analyze and test passing before publishing.

EDUCATION

Eluru College of Engineering and Technology | Eluru, Andhra Pradesh, India
Bachelor's Degree in Computer Science and Engineering (CSE)

2018 – 2021

Languages: English (professional), Hindi (conversational), Telugu (native), Tamil (basic)
