SKILLS

- Flutter
- Firebase
- Rest Apis
- C, C++, Java, Python SQL Lite
- Android/IOS/website
- Critical Thinking Leadership
- Block Patterns, MVC, MVVM, MVP
- Speed Learning
- CI / CD Pipelining
- Code Optimisation
- UI / UX Designs Figma
- Github, GitLab
- React JS
- Bitbucket Azure Devops Services
- Isolates
- Streams
- Razor pay (payment gateway)
- AWS
- AI (vad,)
- Solid Principles

PROFILE

Dynamic and results-oriented Senior Flutter Engineer with 5+ years of official production-grade experience building scalable mobile ecosystems. Proven track record of architecting enterprise-level applications across diverse industries, including AI, Healthcare, Real Estate, Fintech, EdTech, and Wellness platforms. Specialized in modern Flutter architecture, deep performance optimization, complex state management, advanced API integrations, and delivering AI-driven mobile experiences.

Recognized for leading frontend teams, mentoring developers, and translating complex client requirements into flawless technical execution. Passionate about eliminating technical debt and transitioning legacy codebases to modern standards using Clean Architecture, BLoC, and server-driven UI. Delivered multiple production-ready applications with a track record of achieving over 1 million global downloads.

WORK EXPERIENCE

Brane Enterprises Pvt Ltd

2025 - 2026

Senior Flutter Engineer - AI Application | Lead | Full Time

- Spearheaded the end-to-end frontend architecture of enterprise-grade, AI-powered mobile applications, focusing on high scalability and maintainability.
- Executed massive legacy codebase refactoring, transitioning state management from the Provider pattern to strict BLoC architecture to ensure predictable state flow.
- Architected systems using Clean Architecture principles, completely decoupling presentation, domain, and data layers to future-proof the application.
- Implemented strict Dependency Injection using GetIt, resulting in highly testable, modular, and loosely coupled feature components.
- Engineered robust API handling systems utilizing Dio, incorporating complex interceptors for error handling, token refresh logic, and secure communication.
- Innovated user experiences by developing a custom AI Voice Assistant module powered by Voice Activity Detection (VAD) models.
- Developed advanced dynamic widget serialization and deserialization protocols, enabling complex server-driven UI rendering capabilities.

Eclature Technologies

2024 - 2025

Senior Flutter Engineer | Frontend Team Lead | Full Time

- Directed a dedicated frontend Flutter team, managing architecture decisions, project timelines, and the successful deployment of global applications.
- Built a highly scalable global review application from scratch, integrating modern networking (Dio), strict state management (BLoC), and advanced routing (GoRouter).
- Established automated development workflows by implementing comprehensive CI/CD pipelines, completely automating testing and release cycles.

HABITS

- Researching Learning
- New Things Reading
- Thinking Differently

LANGUAGE

- English (Read / Write)
- Hindi (Read / Write)
- Telugu (native)
- Tamil (only i can understand)

- Managed end-to-end deployment workflows directly to both the Google Play Store and Apple App Store.
- Spearheaded the development of a complex educational tutorial application, utilizing advanced Flutter patterns to maximize user engagement and retention.
- Conducted rigorous code reviews, mentored junior developers, and enforced high-quality coding standards across the engineering department.

Marami Infotech2023 – 2024Flutter Developer / Lead Position | Full Time

- Directed a dedicated frontend Flutter team, managing architecture decisions, project timelines, and the successful deployment of global applications.
- Built a highly scalable global review application from scratch, integrating modern networking (Dio), strict state management (BLoC), and advanced routing (GoRouter).
- Established automated development workflows by implementing comprehensive CI/CD pipelines, completely automating testing and release cycles.

CodePrism Technologies2021 – 2023Junior Flutter Developer | Full Time

- Transitioned from ReactJS to dedicated Flutter development, demonstrating rapid skill acquisition and adaptability in a fast-paced agency environment.
- Played an instrumental role in the frontend development of a massive-scale meditation and wellness platform.
- Optimized initial app startup times, rendering performance, and audio streaming capabilities, contributing to the app reaching over 1 million total downloads.
- Assisted in the development of a secure healthcare application, focusing on patient portals and appointment scheduling features.

KEY DOMAIN PROJECTS & DEEP DIVES

Large-Scale Meditation & Wellness Platform

- Impact: 1M+ Global Downloads.
- Technical Details: Developed highly interactive, lag-free UI components for audio streaming and guided meditation sessions. Implemented complex Cubit/BLoC state management for offline tracking, mood logging modules, and user streak calculation systems.
- Stack: Flutter, BLoC, Firebase, REST APIs, Audio Streaming APIs.

Telemedicine & Healthcare Patient Portal

- Technical Details: Engineered secure appointment scheduling systems and integrated video consultation (WebRTC) functionalities. Developed secure authentication workflows, electronic medical report handling, and real-time push notification pipelines for patient reminders.
- Stack: Flutter, WebRTC, Firebase, Secure REST APIs.

Comprehensive Real Estate Suite (10+ Applications)

- Technical Details: Built dynamic property listing architectures handling thousands of image assets and real-time pricing updates. Integrated Google Maps APIs with advanced custom filtering systems, location-based querying, and secure payment gateway integrations for property booking.
- Stack: Flutter, Google Maps APIs, Firebase, Razorpay.

Enterprise AI-Based Learning & Review Platform

- Technical Details: Currently driving the frontend architecture for next-generation AI tutorial applications. Building intelligent interaction systems

- using VAD models and completely decoupling the UI via server-driven dynamic widget rendering.
- Stack: Flutter, Dio, GetIt, BLOC, VAD AI Models.

DEVELOPMENT APPROACH & PHILOSOPHY

- Code Quality & Architecture: Committed to writing clean, heavily decoupled, and reusable code. I treat technical debt aggressively and prioritize modular architectures that allow teams to scale safely.
- Performance Optimization: Obsessed with 60/120fps smooth performance. Experienced in debugging Flutter DevTools, identifying memory leaks, reducing widget rebuilds, and optimizing complex list views.
- User Experience (UX): Strong attention to micro-interactions, responsive scaling across diverse screen sizes, and pixel-perfect implementation of Figma designs.
- Problem Solving: Highly capable of isolating production bugs, designing robust technical solutions, and continuously learning the absolute bleeding edge of Flutter and Dart ecosystem developments.

PROFESSIONAL ACHIEVEMENTS & AWARDS

- 1 Million+ User Scale: Directly contributed to the architecture and UI implementation of an application that successfully scaled to over 1,000,000 global downloads.
- Employee of the Year (Marami Infotech): Recognized for exceptional technical output, team leadership, and deploying over 10 production apps within a single year.
- Employee of the Month (Roptia): Awarded for outstanding remote project contributions, technical problem solving, and efficient remote team management.

EDUCATION

Eluru College of Engineering and Technology 2018 - 2021
Bachelor's Degree in Computer Science and Engineering (CSE)
